and license from future for 6.0 data.if so how i can do this.if any one tell me i will visit my dream.i am working as a salesman and have strong knowledge in computers. i am new in software developing i want to be a co.firm.and i have my own software that i am going to sell it soon.sir please reply to my mail thanks in advance. A: The version information is kept in the header of the file. For example: MS-DOS Version 5.0 and Microsoft Windows for Workgroups Version 5.0 The product version is found by searching the header of the file for the string "MS-DOS Version". So you need to search for the string "MS-DOS Version". I think this has a space after it as well. Look for the position of the first space character, then starting with the character position +1, search for the string "MS-DOS Version". Something like this: #define BUF_SIZE 4096 char buffer[BUF_SIZE]; int bytes_read; FILE* infile; infile = fopen(filename, "r"); if (!infile) { printf("Error opening '%s'", filename); exit(1); } fseek(infile, 0, SEEK_SET); bytes_read = fread(buffer, 1, BUF_SIZE, infile); int pos = 0; while (bytes_read > 0) { char *found = strstr(buffer, "MS-DOS Version"); if (found) { pos = found - buffer; break; } bytes_read = fread(buffer, 1, BUF_SIZE, infile); } You should then be able to call the version specific functions. Hope that helps. Weird nichts sind normal Weird nichts sind normal (Weird Things Are Normal) is a musical by the German theatre collective Henke, Köck, and Kovac. It was premiered in Bochum in 2007. The play, a 82157476af
